damianochintala@gmail.com

PROFESSIONAL SUMMARY

Strategic technology leader and accomplished software engineer with over seven years of experience in FinTech architecture, systems optimization, and enterprise digital transformation. Recognized for delivering scalable, high-impact engineering solutions and maintaining a strong record of open-source contribution and technical innovation. Demonstrates a proven ability to align technology execution with business strategy, with expertise spanning AI integration, data governance, cybersecurity, and resilient infrastructure design. Skilled in architecting high-availability transaction platforms, developing production-grade SDKs, leading complex systems integrations, and overseeing large-scale migrations toward secure, self-hosted, and data-sovereign environments. Combines strong technical depth with leadership, operational oversight, and a results-driven approach to building sustainable technology ecosystems.

CORE TECHNICAL COMPETENCIES

AI Strategy & Governance

AI Tool Optimization Responsible AI Guidelines
Data Governance Risk & Compliance Mitigation
SOP Automation

FinTech & Mobile Money

Airtel Money API MTN MoMo API
SDK Development Transaction Switching
PCI DSS Compliance

Full-Stack Architecture

Node.js Express Supabase PostgreSQL
MongoDB RESTful APIs

Infrastructure & Hosting

Private VPS Bare-Metal Systems Docker
Linux Administration Data Independence

Security & Engineering

Data Encryption Network Architecture SSL/TLS
Test-Driven Development (TDD) CI/CD Pipelines

Analytics & Intelligence

KPI Dashboards Performance Tuning
Workflow Mapping Capacity Planning

PROFESSIONAL EXPERIENCE

AI & Digital Transformation Manager

Plus94 Research

Dec 2025 – Present

- ▶ Leading corporate digital transformation initiatives, redesigning cross-functional operational workflows, data flows, and implementing automated control SOPs.
- ▶ Spearhead organizational AI tool adoption across research, operations, and finance teams while formalizing critical data governance and responsible AI risk frameworks.
- ▶ Design and deploy comprehensive internal reporting infrastructure, corporate analytics modules, and interactive metric dashboards to optimize operational visibility.
- ▶ Enforce information security posture and enterprise business continuity protocols via strict access control systems, continuous monitoring, and structured disaster response models.

Full Stack Development & Integrations Lead

Good Nature Agro

Oct 2022 – Nov 2025

- ▶ Architected and managed high-availability financial transactional software supporting 15,000+ active users with sustained 99.9% application availability.
- ▶ Engineered over 20+ hardened RESTful APIs for loan distribution, repayments, and live account auditing fields while strictly maintaining data alignment standards.
- ▶ Led advanced corporate payment gateway integrations with primary mobile money providers, introducing multi-stage validation checks that drove transaction failure rates down by 60%.
- ▶ Optimized production relational databases (PostgreSQL and MySQL), executing complex query tuning to accommodate multi-tenant real-time ledger generation.
- ▶ Integrated infrastructure deployments using Docker pipelines, modernizing continuous delivery standards while reducing overall release windows by 25%.

Lead Systems Administrator & Integration Specialist

ZamFind Technology

Mar 2020 – Sep 2022

- ▶ Managed baseline server infrastructure, designing proactive telemetry tracking systems that boosted overarching system reliability metrics by 35%.
- ▶ Deployed automated point-of-sale (POS) and internal inventory tracking programs utilizing synchronized logic flows to eliminate transactional discrepancies.
- ▶ Oversaw corporate network topology safety rules, establishing tight access constraints on operational financial ledgers.

Systems Developer & Infrastructure Specialist

Hackers Guild

Jan 2018 – Feb 2020

- ▶ Built and maintained real-time synchronized storage systems via MongoDB and Firebase databases designed for specialized client applications.
- ▶ Conducted practical engineering and core systems architecture training, mentoring rising technical cohorts in reliable backend software development patterns.

KEY PROJECTS & OPEN SOURCE CONTRIBUTIONS

Core Technical Architect & Lead

"OWL" Social Media Platform

Strategic Development

- ▶ Direct the software lifecycle and backend scaling for the African-centered "OWL" platform, implementing massive version overhauls (v2.1.0 to v3.0.0).
- ▶ Executed a successful production migration over to Supabase while decoupling reliance on third-party host systems in favor of self-hosted, private VPS bare-metal structures to safeguard regional data sovereignty.
- ▶ Re-engineered the backend platform feed algorithm, replacing randomized arrays with performance-driven query sets and custom interaction penalties to boost user engagement.

Open-Source Creator

Zambian FinTech Ecosystem Utilities

Ecosystem Impact

- ▶ Authored, maintained, and open-sourced production-grade Node.js SDKs for **Airtel Money** and **MTN MoMo**, unifying and standardizing custom telecommunication payment steps for developers across Zambia.
- ▶ Maintained an elite developer ranking in the region, logging over 1,234 productive development hours and 5,000+ public contributions in a single year cycle.

EDUCATION & QUALIFICATIONS

Professional Frontend Developer Certification

OpenClassrooms | Issued February 3, 2023

Advanced web engineering, responsive architectures, interface execution models, and state handling.

Bachelor of Engineering - Chemical Engineering

The Copperbelt University | 2010 - 2015

Advanced multi-variable calculations, systemic modeling, logic frameworks, and structural problem-solving methods.

Full Stack Web Development Certification

Hackers Guild Training Institute | 2018

PROFESSIONAL CERTIFICATIONS

Linux Foundation Certified IT Associate

ICSS Certified Network Security Specialist

Cybersecurity with Cloud Computing

Agile Project Management & Scrum

Full-Stack with Node.js, Express, and MongoDB

Relational Database Logic Model Design

Test Driven Development (TDD)

KEY ACHIEVEMENTS & VALUE PROPOSITION

Digital Transformation Governance: Veteran track-record mapping manual structural friction points and deploying secure, high-yield enterprise automation tools alongside concrete data management playbooks.

FinTech Infrastructure Domain: Instrumental architect within regional payments systems, providing open-source libraries used to settle mobile financial pipelines securely with 99.9% runtime performance metrics.

Data Architecture & Sovereignty: Advanced skill sets transitioning modern platforms off fragile dependencies and onto hardened, self-hosted, bare-metal or private virtual environments.
